(54) Title: ORGANIC LIGHT-EMITTING DEVICES

(57) Abstract

An organic light–emitting device comprising a light–emissive organic layer (8) interposed between first (4) and second (12) electrodes for injecting charge carriers into the light–emissive organic layer (10), at least one of said first and second electrodes comprising a plurality of layers including a first electrode layer (10) having a high resistance adjacent the surface of the light–emissive organic layer (8) remote from the other of the first and second electrodes, said first electrode layer (10) comprising a high–resistance material selected from the group consisting of a mixture of a semiconductor material with an insulator material, a mixture of a semiconductor material with a conductor material and a mixture of an insulator material with a conductor material.
